**Calculation of UNil for the cyclic group of order two. (English summary)**

*Forum Math.* **22** (2010), no. 2, 221–239.

It is only fairly recently that the methods of algebraic surgery have succeeded in extending the original computations of the UNil-groups of S. E. Cappell [Bull. Amer. Math. Soc. **80** (1974), 1117–1122; [MR0358815](#)] to new classes of examples. The main result in the paper under consideration is the computation of  $\text{UNil}_n(R; R, R)$  for  $R = \mathbb{Z}[F]$ , the group ring of a finite group  $F$  that contains a normal Sylow 2-group of exponent two. The main tools are the relevant papers of Connolly, Davis and the reviewer. *A. A. Ranicki*
